The Australian EMR specialist

Proud creators of

BOSSNET™

The leading Australian EMR specialist

Core Medical Solutions is a leading provider of Electronic Medical Records (EMR) solutions throughout Australia. Our strong reputation has been built from a deep understanding of the Australian Hospital environment and the development of BOSSnet as an intuitive, robust and affordable suite of software applications for health organisations.

Hospitals and healthcare services rely on Core Medical Solutions and BOSSnet to:

- ▶ Effectively and affordably provide EMR solutions for single or multiple hospital sites
- ▶ Develop products that are clinically proven, easy and intuitive to use
- ▶ Enable clients to customise their deployment strategy to suit budget and healthcare needs
- ▶ Deliver clever coding tools for effective health information management
- ▶ Seamlessly interface with third party software systems
- ▶ Deliver critical health information to support effective clinical decision making.

Why Choose Core Medical Solutions

EXPERIENCE & KNOWLEDGE

Our team possesses a deep understanding of Australian hospitals at a clinical, health information management and operational level.

ROBUST & RELIABLE

The BOSSnet software suite has been developed, tested and is 'live' in over 90 Australian hospitals.

FAST & AFFORDABLE

Core Medical Solutions works with their clients to deliver an effective and customised deployment plan to suit budget and immediate healthcare challenges.

INTUITIVE

BOSSnet is easy to use and clinically proven to allow effective information management and quick adoption of new technology.

FLEXIBLE & ADAPTABLE

BOSSnet can be tailored to your hospital needs and is flexible, adaptable and cost effective.

INTEGRATES WITH EVERYTHING

BOSSnet will integrate with legacy information systems or can be deployed as a comprehensive EMR solution.

"Working with **Core Medical Solutions** on the MyHR project has been great. We set out to integrate Barwon Health discharge summaries into the MyHR and in partnership with Core we delivered on that challenge."
Ann Larkins, Chief Knowledge and Information Officer

The flexible, adaptive, intuitive EMR solution

BOSSnet is a comprehensive clinical information system which provides an innovative, flexible and powerful EMR solution. It is a customisable, intuitive and adaptive EMR which makes daily clinical practice easier by enabling greater speed and quality in capturing and distributing health information.

Key Features of BOSSnet EMR Solution

The BOSSnet software suite delivers operationally smart IT solutions and is a powerful tool to assist hospital staff to improve patient outcomes.

COMPLETE EMR

BOSSnet is customisable to allow flexible, affordable implementation as a standalone EMR solution or an integrated application.

MODULAR

To allow hospitals to customise their deployment strategy to suit budget and hospital health information needs.

FAST & ACCURATE

Provides clinicians with comprehensive patient health information for faster, accurate diagnosis leading to better patient outcomes.

USER FUNCTIONALITY

Intuitive and clever suite, loaded with inbuilt and user generated functionality to maximise data capture, interoperability and usability.

INTEGRATES

Integrates with legacy information systems or can be developed as a comprehensive EMR solution.

AFFORDABLE

Cost effective and affordable solutions mean that you can start your journey towards an enterprise EMR solution today.

WEB BASED / MOBILE

BOSSnet is a web based application that is intuitive, user friendly and can be used anywhere, desktop, tablet or mobile.

24/7 SUPPORT

Accessible, responsive, ongoing support and comprehensive training.

Ballarat Health Services

"I have worked with **Core Medical Solutions** on a number of key clinical information projects over the last 6 years including the deployment of **BOSSnet**. In that time **BOSSnet** has become fundamental to our health information and clinical support systems and CMS have been responsive and adaptable to our needs."
Kate Nolan, Director Information Management

Technology that puts you in control

BOSSnet and its associated applications have been widely accepted within Australia.

The BOSSnet software suite is customisable and is easily adapted to suit your hospital or health service, putting you in control of your health information management needs.

Popular BOSSnet Modules

As BOSSnet is fully flexible and adaptable, these and other modules can be used as standalone applications or part of a complete EMR solution.

BOSSnet SCANNING

Digitising paper records through a complete system of scanning tools and processes, unique to medical record management and clinical review.

BOSSnet eFORMS

Increase electronic documentation with easy customer generated eForms or for more advanced functionality the BOSSnet Dynamic eForms. e.g. Customised discharge summary.

BOSSnet ORDERS

Comprehensive toolkit for investigation and consultation ordering with inbuilt logic and intelligence to streamline referral processes.

BOSSnet RESULTS

Enables clinicians to view all patient results (from all linked third party applications) within the single module.

BOSSnet IMAGING

Electronic delivery and viewing of patient radiology results and images.

BOSSnet ALERTS

Central repository for all clinically relevant and patient specific alerts.

BOSSnet MEDICATIONS

Rapidly access current and historical patient medications across inpatient administration, discharge and outpatient prescribing.

BOSSnet MESSAGING

Messaging tool for electronic data exchange and patient management interface with external source.

BOSSnet MOBILE APP

Access patient information via mobile application across all products.

Leading edge technology

The BOSSnet software suite is built on leading edge technology providing a highly adaptable platform, loaded with inbuilt and user generated functionality to maximise data capture, interoperability and usability.

As well as the traditional capabilities of a fully functional EMR, BOSSnet provides numerous unique tools to deliver real advantages for client usability and effectiveness. Some examples are highlighted below. Visit our website to learn more about the power of BOSSnet.

MY HEALTH RECORD INTEGRATION

BOSSnet delivers sophisticated interoperability and standardisation in line with the MyHR objectives. BOSSnet is a leading contributor to the MyHR repository, and is tightly integrated with the MyHR record, allowing a seamless view of the patient's MyHR documents within BOSSnet.

CLINICAL CODING

The coding and DRG audit process facilitated by BOSSnet, results in significant improvements to ABF reimbursements. One client boasting that **since the introduction of BOSSnet, there has been a 185% increase in the coding and DRG audit yield which has led to significant additional revenue!** Electronic coding queries enable Health Information Managers (HIMs) and Clinical Coders to send eForm documentation queries directly to Clinicians via email. The clinician can then launch directly into the patient record to review and respond to the query. Information added to the patient record post discharge or post clinical coding can also be easily identified allowing the HIM or Coder to go back and review the patient episode.

NOTIFICATIONS AND SECURE MESSAGING

BOSSnet can automatically notify GPs and other referrers when their patient arrives in the Emergency Department, or is discharged. This is done via a secure messaging application which uses PKI encryption and is also used to deliver other clinical information to community clinicians and referrers.

ADVANCED NOTIFICATION EVENTS

Configurable events within BOSSnet allow sites to setup complex processes based on real-time events, such as:

- ▶ Closed loop order entry, results review and acknowledgements
- ▶ Real time notification of abnormal patient results
- ▶ Automated workflow based patient admission or document events
- ▶ and many more.

ORDER ENTRY AND REFERRALS

BOSSnet's Order Entry module can be used as a comprehensive CPOE tool, allowing direct paperless order entry, for pathology, radiology and all forms of services. Sophisticated feedback tools reduce unnecessary or duplicate service requests, a costly preventable problem. Many BOSSnet sites have created paperless internal referral processes, using BOSSnet for clinicians to generate a referral and the service to manage them.

eFORMS

The BOSSnet eForm design environment is simple to use and allows users in your organisation to build electronic data entry forms to capture and display clinical data. eForms allows your site to transition from paper based, to paper light, to fully paperless, at a pace that suits your organisation and clinicians.

PATIENT SMS APPOINTMENT REMINDERS

BOSSnet SMS messaging is a powerful tool that enables you to send SMS reminders to patients of upcoming appointments, improving patient attendance and outpatient flow. SMS can be used for many notification purposes inside of BOSSnet.

PAPER EPISODE TRACKING TOOL

Paper episode tracking allows health information service staff to identify whether paperwork is physically in the department and whether it has been scanned or not. It is an impressive tool that allows you to monitor scanning KPI's such as:

- ▶ Date first received, date first scanned
- ▶ Discharge to receipt time, discharge to scan time, and receipt to scan time.

Our clients

BOSSnet is a proven system in over 90 Australian hospitals.
