

The BOSSnet software suite delivers operationally smart IT solutions and is a powerful tool to assist hospital staff to improve patient outcomes through its innovative, flexible and powerful Electronic Medical Record (EMR).

**BOSSnet Scanning** digitises paper records through a complete system of scanning tools and processes designed for medical record management and clinical review.

BOSSnet Scanning has been widely recognised across Australian hospitals as the leading digital medical record solution providing clinically relevant functionality and usable customisation. It can be deployed as a standalone digital medical record (DMR), integrated with legacy systems or as a foundation of the BOSSnet Clinical EMR.

BOSSnet Scanning enables Electronic Medical Record (EMR) access to scanned paper records along with electronically populated eForms as an ideal financial and

strategic step for hospitals progressing towards a complete EMR. Create and manage patient medical record information electronically through rapid data entry on mobile devices or via existing medical records or handwritten notes.

From the scanning workstations, to HIM quality control, to final clinical review of the medical record; BOSSnet Scanning is your best solution for managing onsite storage issues and change management in becoming a paperless hospital.

# Key features of BOSSnet Scanning

## ▶ USER PROFILES

Depending upon user profiles, the system knows how to present the medical record in a format which best suits individual requirements.

## ▶ DOCUMENT VERSATILITY

BOSSnet scanning handles the many varied kinds of medical forms, whether they are A3 ICU charts or multipage medication sheets.

## ▶ OPTIMISE SPACE & COSTS

BOSSnet Scanning enables the rationalisation of storage and maintenance cost as you move to a paperless hospital.

## ▶ CENTRALISED & SITE SPECIFIC RECORDS

Organisations operating across multiple campuses or locations are able to establish a centralised patient record whilst also maintaining site-specific patient records.

## ▶ INTELLIGENT TOOLS

Streamlined image acquisition and intelligent display is complemented by form recognition even without barcodes or header sheets, automatic page orientation and blank page removal on all scanned images.

## ▶ EASY INTERFACE

Legacy clinical documentation repositories and information systems can be interfaced to automatically upload documents to the relevant patient's DMR.

## ▶ UNIQUE DOCUMENT FILTERS

Users will be able to rapidly find exactly what they are looking for in BOSSnet Scanning by taking advantage of our unique document filters and free-text search across the entire medical record.

## Leading edge technology

**The BOSSnet software suite is built on leading edge technology providing a highly adaptable platform, loaded with inbuilt and user generated functionality to maximise data capture, interoperability and usability.**

As well as the traditional capabilities of a fully functional EMR, BOSSnet Scanning provides numerous unique tools to deliver real advantages for client usability and effectiveness.

- ▶ Dynamic collation allowing a customisable view of the medical record. Using dynamic collation rules the same document can be configured to display in multiple locations suitable to the person viewing the record.
- ▶ Paper episode tracking allows staff to identify where paperwork is located, and whether it has been scanned. This impressive tool allows you to monitor key scanning KPI's.

- ▶ Automatic blank page detection and removal to maximise scanning throughput.
- ▶ Recognition of scanned forms even without barcodes enables external forms to be processed rapidly.
- ▶ Automatic rotation of forms which means scan operators do not need to configure each form manually.
