

BOSSNET[™]
eFORMS

The BOSSnet software suite delivers operationally smart IT solutions and is a powerful tool to assist hospital staff to improve patient outcomes through its innovative, flexible and powerful Electronic Medical Record (EMR).

BOSSnet eForms increase electronic documentation with easy customer designed eForms or for more advanced functionality BOSSnet Dynamic eForms.

The BOSSnet eForms design environment is simple to use and allows users in your organisation to build electronic data entry forms to capture and display clinical information.

BOSSnet Dynamic eForms enable more advanced functionality and bespoke customer eForms to be developed such as customised discharge summaries. BOSSnet eForms are highly customisable and can be built to suit mobile devices.

Clinicians across your organisation are able to record data and notations directly into BOSSnet in preference to writing on paper. This instant availability means that BOSSnet eForms are able to be implemented as users adapt to the change, allowing your site to transition from paper based, to digitised, to fully paperless, at a pace that suits your organisation and clinicians.

Key features of BOSSnet eForms

▶ REDUCE PAPER WASTE

Existing BOSSnet sites have replaced their existing paper forms cataloguing system with BOSSnet eForms which they themselves have developed. The savings on external stationery procurement are extraordinary.

▶ CROSS PLATFORM EFFICIENT

To significantly reduce duplication, BOSSnet eForms enables data fields which are common across multiple forms to be re-used and for their content to be automatically populated the next time a user opens a blank eForm which contains that field.

▶ AUTOMATIC DATA POPULATION

Data fields can even be automatically populated from other BOSSnet modules to reduce duplication, such as a recent results values, assessments statuses etc.

▶ MOBILE & CUSTOMISABLE

BOSSnet eForms can be completely designed to suit your specific forms and business rules, you are not locked in to any pre-set templates, layouts or data fields. Forms can be built to suit mobile devices and make use of mobile friendly controls.

▶ FORM MANAGEMENT

BOSSnet eForms allow you to design, implement and dynamically manage your own catalogue of online electronic forms.

▶ DATA FIELD INTEGRATION

Each data entry point on a BOSSnet eForm is given a data field name, the data is then associated with that field name independently of the form and can be used and combined with others for reporting purposes.

Leading edge technology

The BOSSnet software suite is built on leading edge technology providing a highly adaptable platform, loaded with inbuilt and user generated functionality to maximise data capture, interoperability and usability.

As well as the traditional capabilities of a fully functional EMR, BOSSnet eForms provides numerous unique tools to deliver real advantages for client usability and effectiveness.

- ▶ Implement business rules to guide users through completing forms, displaying sections as required dependent on other selections or even the result of other forms.
- ▶ Perform calculations to make completing forms easier for users and implement protocols.
- ▶ Structured input controls including lists, calendars, drawing tools, radio buttons and checkboxes etc.
- ▶ Multi-contributor forms allow multiple users and disciplines to contribute to forms in a structured way.
- ▶ Observations data capture and charting. Build complete dynamic observation charts with highly customisable display and filtering, or implement simple table style observation based forms with ease.
- ▶ BOSSnet eForms adhere to the BOSSnet security and access control model. This gives you complete control over who can complete forms but also means users are only presented with forms relevant to their role.
