BOSSNET™
MEDICATIONS

Allscripts®

The BOSSnet software suite is a powerful tool to assist hospital staff to improve patient outcomes through its innovative, flexible and powerful Electronic Medical Record (EMR).

BOSSnet Medications is a comprehensive electronic medication management system delivering cutting-edge features to drive quality and efficiency in prescribing and administration of pharmaceuticals in the hospital environment.

Covering the complete patient journey from admission, through inpatient and critical care areas, discharge from hospital and outpatient follow up, BOSSnet Medications will advance the maturity model of your organisation's health information platform to deliver improved outcomes and clinician satisfaction.

With support for third-party knowledge bases and integration with alerts management, more high-quality information is available at the point of prescribing than ever before.

Integration with your pharmacy management system and support for PBS prescribing, streamlines and accelerates the transfer of information, assisting with compliance and improving information quality and removing impediments to patient flow.

Key features of BOSSnet Medications

SAFE AND EFFICIENT
Eliminate the dangers of transcription errors, misspelling and legibility issues, whilst saving clinicians' time with rapid prescribing and common order sets.

TEAM WORKFLOWS
It takes ongoing team effort through the patient journey to deliver safe and effective medications use. BOSSnet Medications facilitates the team interactions of prescribers, pharmacists, nursing staff and primary care in recording a medications history, reviewing inpatient medication use and completing and communicating medication reconciliation to all involved in the patient's care.

INTELLIGENT, FAMILIAR CHARTS
Adopting the guidelines of the National Inpatient Medication Chart provides a familiar appearance for clinicians, whilst delivering a dynamic electronic document that paper simply can't match.

MOBILE FRIENDLY
BOSSnet Medications is designed for finger-friendly use on a modern touchscreen device, so that your team can capitalise on the enormous strides that have been made in mobile devices and networking to handle medications from the bedside, the next ward, the next wing or on remote call.

KNOWLEDGE BASE INTEGRATION
BOSSnet Medications management integrates with the knowledge bases that you know and rely on to provide comprehensive prescribing information on tap when you need it. Local treatment and prescribing protocols are available at the point of prescribing to foster the use of standards-based care.

DECISION SUPPORT
A configurable engine for dose range and interactions checking can be implemented at a local level to suit your specific needs, as well as being backed by extensive third-party drug interactions database check at the point of prescribing.

Leading edge technology

The BOSSnet software suite is built on leading edge technology providing a highly adaptable platform, loaded with inbuilt and user generated functionality to maximise data capture, interoperability and usability.

As well as the traditional capabilities of a fully functional EMR, BOSSnet Medications provides numerous unique tools to deliver real advantages for client usability and effectiveness.

- Commonly prescribed drugs can be saved as favourites for quick and easy access.

- Links to external third party knowledge bases such as eMIMS, and Therapeutic Guidelines.

- Variable dose medications and linked pathology results support complex prescribing scenarios.

- BOSSnet Results review can automatically supply relevant pathology results to integrate into the medication chart.

- BOSSnet Medications management incorporates responsive design to adaptively display on tablet and smartphone devices.

- BOSSnet Medications provides active clinical alerts at the point of prescribing.
